The Stanford University Department of Pathology offers a two-year ACGME accredited fellowship in Neuropathology. We have positions available for the 2010-2011 and 2011-12 academic years. Training is based at Stanford Hospital and the Lucile Salter Packard Children's Hospital. The fellowship trainee is provided with major responsibility for diagnosis of both institutional and consultative material including approximately 600 adult and pediatric brain tumors, 400 regional and national consultative cases, 300 muscle biopsies, 25 nerve biopsies, 200 autopsies and 30 consultation brains. Numerous opportunities exist for translational and basic research with the goal of achieving a competitive position in neuroscience research, depending on the aims of the trainee.

Requirements include M.D. or equivalent degree, eligibility for a California medical license and at least two years of training in anatomic pathology, or one year of anatomic pathology following neurology or neurosurgery training. Salary will be commensurate with the applicant's level of training. A generous housing allowance is provided.
